

Build an API service using .NET 5 where a user can send a list of words through a post request and a page size n using request header. The header name should be page-size. Now you have to construct line(s) using those words where each line can contain a maximum n number of characters. Return the constructed line through a get request.

API Endpoints:

1. /post
  - a. Request type: POST
  - b. Request header: page-size
  - c. Data: List of string
  - d. Response status code: 201
2. /get
  - a. Request type: GET
  - b. Response: List of lines
  - c. Response status code: 200
